Forecompliance for Aviation
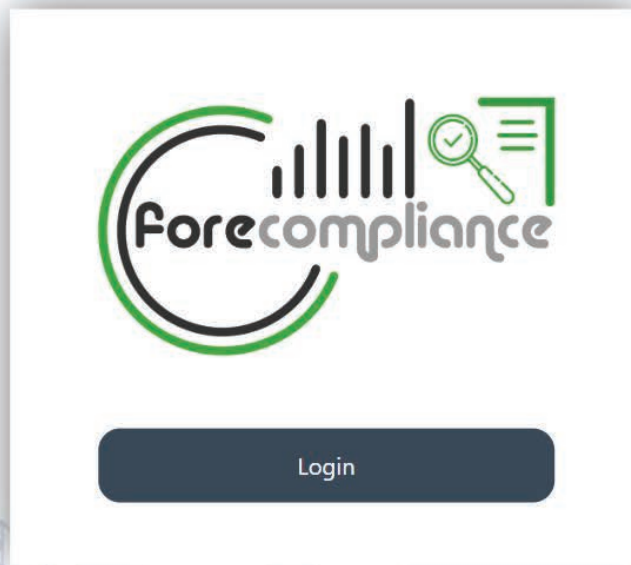

A Full Audit Solution For Airside Operations

**Compliance & Safety**

Digital Audits

User ID & Time Log

Time Stamped Logs

Evidence Capture

Asset Status Images

Aircraft Audits

Digital app for simple, real-time audit logging

In-built image upload for evidence capture

Defined user IDs with location & time stamped logs
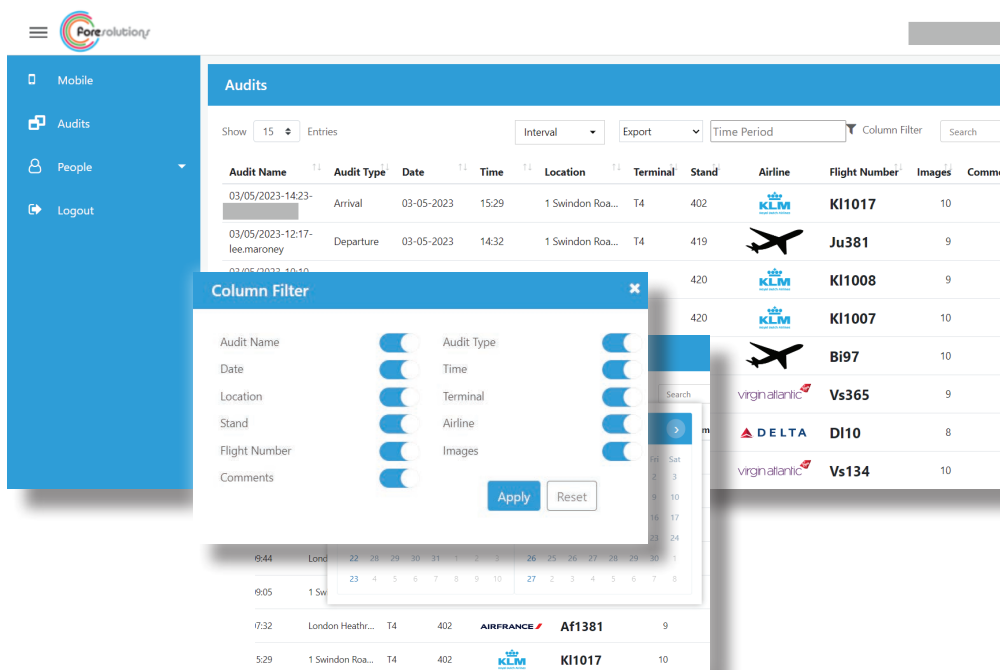

Airside Operations Compliance Audits

Introducing Forecompliance: we have developed an aviation-specific application that enables fool-proof logging of airside audits.

An end to manual paperwork, easily falsified records and unfair damage claims through lack of evidence.

Whether it's departures, arrivals or turnarounds you need to manage, Forecompliance makes it easy with a mobile app that all your airside ground crew can access from an Android smart device and create their own audit that syncs back to a cloud based management portal.

Audit Functionality Summary

- See all audits at a glance

- Filter by date, airline, terminal, audit type and much more

- Fully exportable as an Excel, CSV or PDF file

- Click on the eye icon to see full detailed audit including photographs

Audit Detail
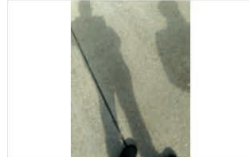

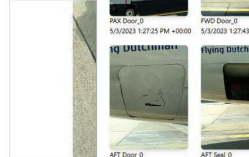

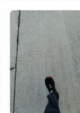

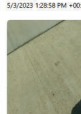

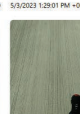

Mobile App Based Audit Template
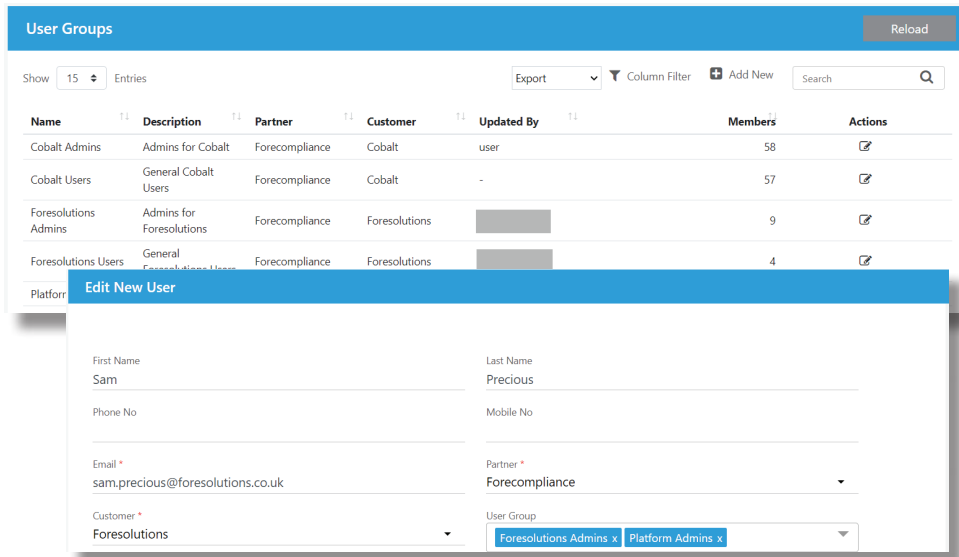

- User accesses the Forecompliance app on their mobile device.

- User, location and time information will populate automatically, mitigating risk of incorrectly logged data and making it easier to find any CCTV/security camera footage in cases of incidents.

- Type of audit, terminal & stand categories are pre-programmed for your airport.

- Photographic evidence of aircraft/asset status and condition are captured form the mobile device by selecting the upload images command. The user can then add a comment.

- Upon submission that audit report is filed and time stamped against that user ID on the Forecompliance cloud based platform.

- User access is set for ground staff and supervisors/managers for various levels of audit access and visibility.

User Groups & Permissions

- **Users can be grouped for ease of management and by permission**

- **Each individual user is assigned permissions appropriate for their role which controls which information and features they have access too.**

"We chose Foresolutions as our new communications and tracking provider, as they have a solid background in Aviation expertise and a wide scope of device-agnostic options. Initially we needed an upgraded communication system to replace our existing two way radios which were often patchy and unreliable. As a true systems integrator, their proposed solution of a new PoC radio set up that was not solely reliant on voice, opened up so many more opportunities to create a multi-functional set up that also met our requirements to have a robust, digital audit trail solution for logging the movements around the aircraft.

Now all our work is documented with live images that have a user and time stamp that protect us from any potential unfair damage claims. We've gone on to commission a new camera tracking project for our critical airside vehicles to improve safety and operational efficiency. All our assets now have live location tracking so all employees can find and use the nearest one, supervisors can accurately monitor utilisation. The team at Foresolutions have been knowledgeable, flexible and responsive to our needs. I would wholeheartedly recommend them to anyone looking to take the next step in their tech journey."

Ben Cordingley, Head of Operations, Cobalt Ground Solutions, Heathrow Airport
